**Pack. Protect. Preserve.**

### **We protect what is important for a future worth living.**

#### **The right packaging for every product.**

We offer solutions for greater sustainability in the packaging industry with films that are 100% recyclable and produced with up to 70% circular plastics.

We specialise in the manufacture of plastic packaging. We produce, process and distribute PE film for clients from trade and industry. We have already gathered 50 years of experience in this field, and advise our clients on an individual level whilst offering the highest standard of quality.

Today, we serve a number of reputable European clients with our versatile machine park. Our reliability and the experience that comes with it is what sets us apart. Alongside professional competence, our long-term employees are our most valued resource. Our business relations are long-lasting and built on partnership, thereby supporting us to continuously grow and improve.

**We count commitment to quality, a client-oriented approach, high flexibility and constant further development of our products among our strengths. Our clients value the speed with which we process orders, our short delivery times, fair prices and consistently high quality.**

Are you looking for a partner to provide industrial packaging solutions or need to meet high requirements from the food or pharmaceutical industry? We are happy to help.

## OUR VALUES

### **Pack. Protect. Preserve.**

#### **We act on conviction.**

We are just as focussed on protecting the earth as protecting goods and products.

We now want to use our competence in producing film to do something good. We aim to convince with our position and provide our clients with sound advice. A wide range of large companies place their trust in us and know that we are constantly driven by innovation and improving our product portfolio. We will make our packaging so sustainable that we will still be able to protect goods and products in decades to come, and will thus further support our clients in reaching their sustainability targets.

**We are committed to making at least 30% of the entire production volume with circular plastics by 2025, without compromising our consistently high quality.**

And we are on the right track. We have always offered 100% recyclable films and process any film waste in our in-house recycling facility. Following the 'circular design' system, we strive to predominantly use recyclable materials, reduce the amount of packaging per product and keep increasing the use of circular plastics. Our focus on sustainable and environmentally friendly operating processes is reflected in our certificates.

**You can find out more  
about our position

## OUR PRODUCTS

**With our products you choose how you want to protect the environment.**

**Whether GP-Sustain or GP-Loop, you are doing your bit either way.**

### **GP-Sustain: 100% recyclable and hygienic**

Film produced according to BRC standards and Good Manufacturing Principles (GMP).

GP-Sustain protects food and pharmaceutical products and is a 100% recyclable PE film packaging for the hygienic protection of foodstuff, feed and pharmaceutical products. GP-Sustain utilises certified raw materials and is strictly manufactured according to the requirements of the Global Food Safety Initiative (GFSI) standards.

### **GP-Loop: 100% recyclable and up to 70% circular plastics**

The best way to do something for our environment with plastic film.

Our GP-Loop product line is a 100% recyclable PE film with the purpose of protecting industrial goods of all kinds and shapes, including secondary food packaging. GP-Loop contains high-quality circular plastics, available in the following mixtures: GP-Loop30 (30% recycled content), GP-Loop50 (50% recycled content), GP-Loop70 (70% recycled content). GP-Loop provides the usual high-quality and transparency standards thanks to the latest filtering technology. The PCR materials that we use in our products have EuCertPlast certification.

**Find out more about the GP-Sustain and GP-Loop application areas [HERE](#) on our website.**

## GP Sustain

100% recyclable and hygienic protection

#### **Agricultural film**

Reliable protection against weather influences and pests.

#### **Food packaging**

Safe packaging for transport and protection, according to individual specifications.

#### **Service packaging**

For the transport and protection of loose goods, such as at self-service counters.

#### **Pharmaceutical packaging**

Keeping special hygiene requirements, for example for medicines or healing tinctures.

## GP Loop

100% recyclable and containing recyclate for industrial goods protection and secondary packaging

#### **Product packaging**

Production of packaging according to individual needs.

#### **Protection film**

Hygienic, safe and clean handling of goods.

#### **Transport packaging**

Protection and safe transport of goods for every application.

#### **Industry & Retail**

Various solutions for waste collection and waste disposal.

## OUR MACHINE PARK AND PRODUCTION

**Always at the cutting edge. Versatile and organised.**

**Sustainable product design is only possible with specialist knowledge and the right tools.**

Thermoplastic blow films are characterised by an extraordinary strength and high tear resistance.

Our films are produced exclusively on blow film lines made by reputable German manufacturers. The quality of the tools is decisive in ensuring a good end-product. Within our production we can produce films that solely comprise one layer (mono film), and films that are made of several layers (coextruded film).

We supply our finished films on rolls in widths ranging from 100 mm to 2,100 mm. The perimeter can be as large as 5,600 mm on our extrusion lines. Typical processing materials are LDPE, LLDPE, MDPE and HDPE.

We have PE product packaging for practically any application. From automatic packaging film through to shrink cover film, we are always quick to find tailor-made solutions for our clients.

You can learn more about our production [HERE](#) on our website.
